Nothing Found

Your search for +"IEEE 802.11" +"multiple beacon" "Access point" did not return any results.

You may want to try an [Advanced Search](#) for additional options.

Please review the [Quick Tips](#) below or for more information see the [Search Tips](#).

Quick Tips

- Enter your search terms in lower case with a space between the terms.

sales offices

You can also enter a full question or concept in plain language.

Where are the sales offices?

- Capitalize proper nouns to search for specific people, places, or products.

John Colter, Netscape Navigator

- Enclose a phrase in double quotes to search for that exact phrase.

"museum of natural history" "museum of modern art"

- Narrow your searches by using a + if a search term must appear on a page.

museum +art

- Exclude pages by using a - if a search term must not appear on a page.

museum -Paris

Combine these techniques to create a specific search query. The better your description of the information you want, the more relevant your results will be.

museum +"natural history" dinosaur -Chicago

Relevance scale ☐ ☐ ☐ ☐ ☐1 [The cricket compass for context-aware mobile applications](#)

Nissanka B. Priyantha, Allen K.L. Miu, Hari Balakrishnan, Seth Teller

July 2001 **Proceedings of the 7th annual international conference on Mobile computing and networking**

Publisher: ACM Press

Full text available: [pdf\(436.20 KB\)](#) Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#)

The ability to determine the orientation of a device is of fundamental importance in context aware and location-dependent mobile computing. By analogy to a traditional compass, knowledge of orientation through the *Cricket compass* attached to a mobile device enhances various applications, including efficient way-finding and navigation, directional service discovery, and "augmented-reality" displays. Our compass infrastructure enhances the spatial inference capability of the ...

Nothing Found

Your search for **+"plural beacons" "Access point"** did not return any results.

You may want to try an [Advanced Search](#) for additional options.

Please review the [Quick Tips](#) below or for more information see the [Search Tips](#).

Quick Tips

- Enter your search terms in lower case with a space between the terms.

sales offices

You can also enter a full question or concept in plain language.

Where are the sales offices?

- Capitalize proper nouns to search for specific people, places, or products.

John Colter, Netscape Navigator

- Enclose a phrase in double quotes to search for that exact phrase.

"museum of natural history" "museum of modern art"

- Narrow your searches by using a + if a search term must appear on a page.

museum +art

- Exclude pages by using a - if a search term must not appear on a page.

museum -Paris

Combine these techniques to create a specific search query. The better your description of the information you want, the more relevant your results will be.

museum +"natural history" dinosaur -Chicago

1 [The Cricket location-support system](#)

Nissanka B. Priyantha, Anit Chakraborty, Hari Balakrishnan

 August 2000 **Proceedings of the 6th annual international conference on Mobile computing and networking**

Publisher: ACM Press

 Full text available: [pdf\(1.22 MB\)](#) Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#)

This paper presents the design, implementation, and evaluation of Cricket, a location-support system for in-building, mobile, location-dependent applications. It allows applications running on mobile and static nodes to learn their physical location by using listeners that hear and analyze information from beacons spread throughout the building. Cricket is the result of several design goals, including user privacy, decentralized administrat ...

2 [Experimenting with an Ad Hoc wireless network on campus: insights and experiences](#)

C.-K. Toh, Richard Chen, Minar Delwar, Donald Allen

 December 2000 **ACM SIGMETRICS Performance Evaluation Review**, Volume 28 Issue 3

Publisher: ACM Press

 Full text available: [pdf\(1.10 MB\)](#) Additional Information: [full citation](#), [abstract](#), [index terms](#)

Ad hoc wireless networks are new communication networks that can be dynamically formed and deformed on-the-fly, anytime and anywhere. User data is routed with the help of an ad hoc mobile routing protocol. Before the deployment of ad hoc mobile services, the communication performance of such networks has to be evaluated to demonstrate the practicality limits based on today's hardware and innovative communication software. This paper describes the realization of an ad hoc wireless testbed and the ...
